

**ASSIGNMENT 4**

(a) Demonstrate Javascript Variable declaration(var,let and const).

The screenshot shows a web browser window with a Notepad application open. The Notepad window, titled 'var - Notepad', contains the following HTML and JavaScript code:

```
<html>
<body>
  <script>
    var a =20;
    document.write("variable value:",a);
    var a="hello engineers"
    document.write("variable value:",a);
  </script>
</body>
</html>
```

The browser window shows the output of the JavaScript code: 'variable value:20variable value:hello engineers'. The browser's address bar indicates the file path: 'D:/21se02ml006(javascript)/var.html'.

var1 - Notepad

5

## (b) Demonstrate Javascript operators.

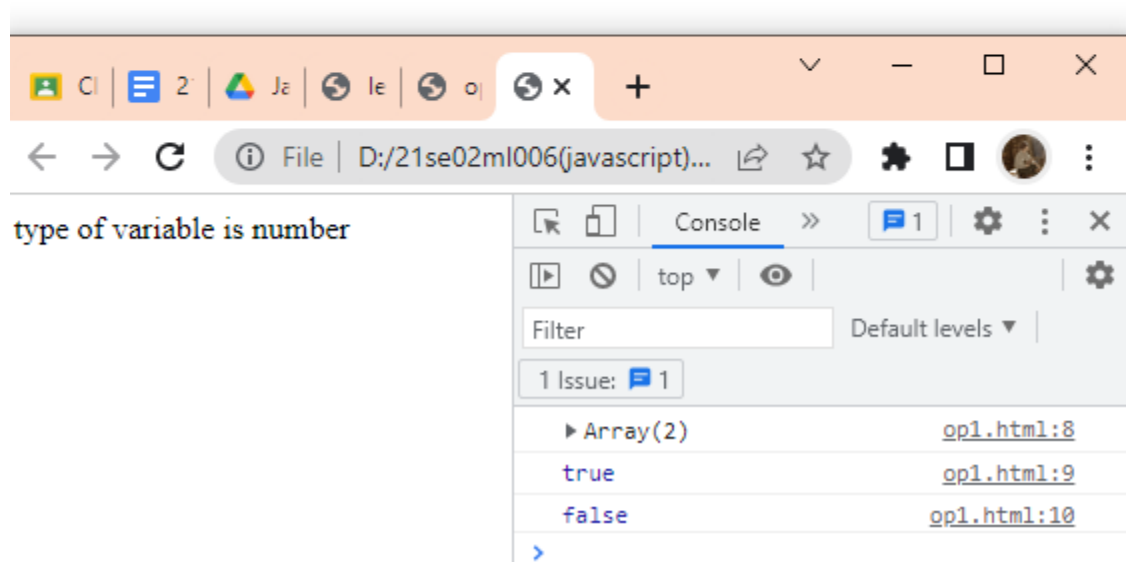

### Arithmetic operators

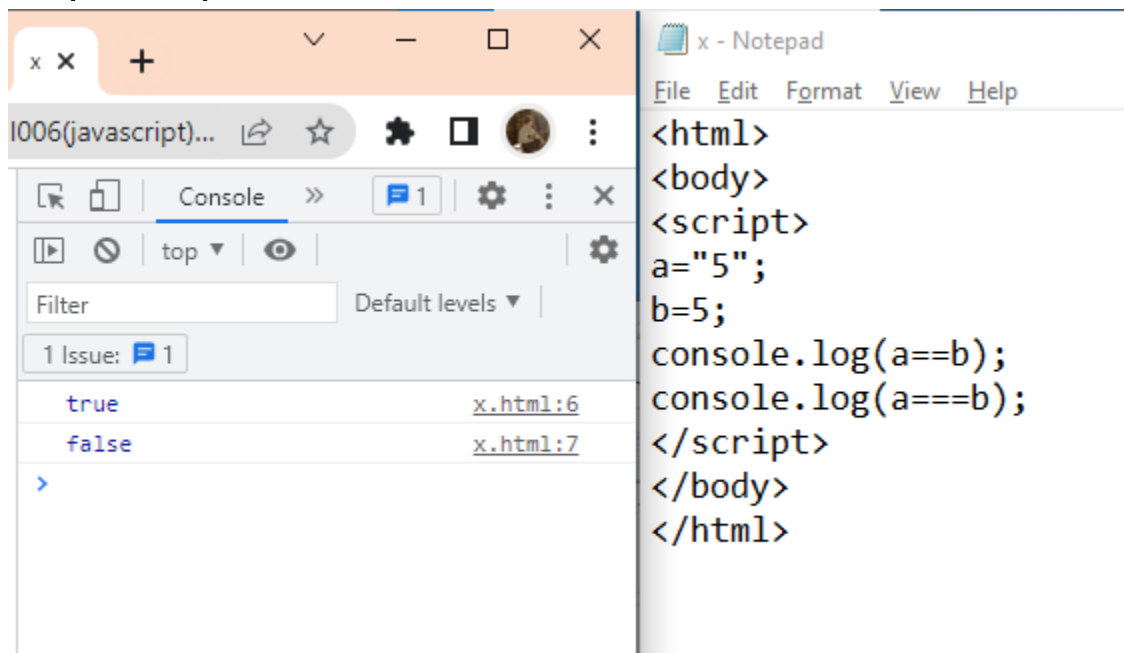

```
<html>
<body>
<script>
let ans ,a ,b;
a=10;b=20
ans=a+b;
document.write(a,"+",b,"=",ans);
a="good";b="morning"
ans=a+b;
document.write("<br>",a,"+",b,"=",ans);
</script>
</body>
</html>
```

**type operators**

```
<html>
<body>
<script>
let a;
a=10.6;
document.write("type of variable is ", typeof(a));
let departments=["CE","IT"]
console.log(departments)
console.log(departments instanceof Object);
console.log(departments instanceof Number);
</script>
</body>
</html>
```

**Comparison operators**

The image shows a web browser window on the left and a Notepad window on the right. The browser's console displays the output of JavaScript code: `true` on line 6 and `false` on line 7. The Notepad window contains the following HTML and JavaScript code:

```
<html>
<body>
<script>
a="5";
b=5;
console.log(a==b);
console.log(a===b);
</script>
</body>
</html>
```

The browser's console shows the following output:

Message	Source
true	x.html:6
false	x.html:7
