ASSIGNMENT 3
(a) List Real time applications of Javascript.

JavaScript is widely used for building websites and web applications.

1. Web Development

2. Web Applications

3. Presentations

4. Server Applications

5. Web Servers

6. Games

7. Art

8. Smartwatch Apps

9. Mobile Apps

10. Flying Robots

(b) Explore various Javascript Frameworks.

1. Angular

2. Vue.js

3. React

4. Node.js

5. Ember

6. Backbone

7. Meteor

8. Aurelia

9. Mithril

10. Svelte

Conclusion

If you are just getting started with JavaScript, you can consider Angular, React, and Vue as popular choices. If you need to work on a complex project, you can choose Node.js. Moreover, it is significant to consider your project needs and the features required for app development. No matter which framework you choose, ensure that it supports good documentation.
